K-003_kids

Dikson

The complex consists of ten vertical columns, six crossbars 800 mm in length and two horizontal monkey bars of different heights. Length of the monkey bar – 1952 mm, width – 800 mm, distance between each crossbar – 274 mm. The complex is secured together with siluminium clamps.

Installation instructions:

- Choose a suitable underground for the unit (see page 2, table 2)!
- Prepare the construction pit with a drilling machine or other devices.
- Before pouring the concrete all structures elements must be leveled and fixed.
- Complex elements must be fixed and bolted together with metal clamps.
- Ready-made C25 concrete should be used.
- Crossbars installation height can be changed according to customer's wishes.
- Approximately 0,15m³ concrete is needed for each spot foundation.
- Under the structures we recommend to install absorbing rubber cover.

The size of the hole for the foundation is depending on the consistency of the ground. The dimensions mentioned above are applicable for normal conditions with firm ground. If the ground is extremely soft, a much bigger foundation is needed. Use only appropriate material and follow the installation instructions closely!!!

Foundation plan and area of movement of the K-003_kids				Technical information		
Foundation when using Shock absorbing underground (synthetic – rubber granulates)		Beveling of foundation when using loose filling material		width:	1016 mm	
				height:	2050 mm	
				length:	5760 mm	
				largest part:	2650 mm	
				weight:	150,26 kg	
				floor space required	8860 x 4316 mm	
				pipe measurements:	diameter:	wall thickness:
					108 mm	3.0 mm
					33.7mm	3.0 mm
				columns Ø108mm:	anodized profiled aluminium tube AW6060 (Silver color)	
				elements:	stainless steel AISI 304, brushed surface	
				metal clamps:	siluminium, powder coated, RAL 9005 (pure black)	
				bolts for metal clamps	stainless steel, Pin Hex Button Head Security bolts M10
